

Short Bio Martin Frejno

Martin obtained his DPhil in Oncology in the group of Prof. Stefan Knapp at the University of Oxford in collaboration with Prof. Bernhard Küster at the Technical University of Munich in Germany. During his studies, he focused on the pharmacoproteomic characterization of human colon and rectal cancer and subsequently broadened the scope of his research to bioinformatics and the large-scale characterization of cell line phosphoproteomes during a PostDoc in Prof. Bernhard Küster's laboratory. Together with colleagues from the Küster lab, Martin incorporated MSAID with the goal of aiding mass spectrometry-based proteomics with artificial intelligence. As managing director, Martin is responsible for the long-term strategy of MSAID.
